

Warm roofs

What Is a Warm Roof?

A warm roof is an advanced roofing system designed to transform your conservatory into a comfortable, energy-efficient living space — all year round. Unlike traditional glass or polycarbonate roofs, a warm roof features layers of high-performance insulation that help retain heat in winter and reduce solar gain in summer.

In simple terms, a warm roof turns your conservatory into a true extension of your home — not just a seasonal room.

Key Benefits of a Warm Roof System

1. Superior Thermal Efficiency

Warm roofs are fully insulated, drastically improving energy performance.

By minimizing heat loss through the roof, you can enjoy:

Lower heating bills

A consistent indoor temperature

A usable space even in cold weather

2. All-Year-Round Comfort

No more “too hot in summer, too cold in winter.” The insulation and ventilation layers work together to create a balanced, comfortable environment in every season.

3. Modern Aesthetic Appeal

Warm roofs come with a range of attractive finishes that can complement your home’s style. Whether you prefer a classic or contemporary look, these systems can be tailored to match your property.

4. Noise Reduction

Insulated Pristine PVS’s warm roof also reduce external noise — ideal if you live near busy roads or want a quieter, more peaceful conservatory.

5. Increased Property Value

A fully insulated conservatory roof can add value to your home, making it more appealing to buyers looking for extra functional living space.
